(54) Title: METHOD AND DEVICE FOR MANUFACTURING PACKAGES

(57) Abstract: A method and a device for  
manufacturing packages are provided. The  
method comprises providing a tubular first  
package part of a sheet of thermoplastic  
coated packaging material including at least  
one layer of an induction heatable material.  
The first package part has a sealed first joint  
between two mutually opposing edge sections  
of the sheet. The method further comprises  
joining together the first package part and  
a second package part by a second joint,  
the first and the second joint intersecting  
each other. The method further comprises  
arranging induction heating means including  
at least two conductors extending along  
each other, so that the conductors extend  
along the second joint and sealing the second  
joint by feeding an inducing current through  
the induction heating means. The inducing  
current is conducted by the conductors along  
the second joint in opposite directions in said  
at least two conductors.
